TITLE

A combination of the Monte-Carlo and steepest descent methods for solving some extremum problems

PERIODICAL: Zhurnal vychislitel'noy matematiki i metematiceskoy fiziki, v. 2, no. 3. 1962, 499-502

TEXT: Given $n \geq 3$ points (x_i, y_i) in the plane and n positive weights K_i , the problem is to minimize the function

$$f(a_1, b_1, a_2, b_2, \dots, a_m, b_m) = \sum_{i=1}^n k_i \sqrt{(x_i - a_{j(i)})^2 + (y_i - b_{j(i)})^2}$$

$m < n$, where (x_i, y_i) is attached to the nearest point (a_j, b_j) denoted $(a_{j(i)}, b_{j(i)})$. For $m = 1$ (Steiner problem) the algorithm proposed is based on the method of steepest descent. From the center of gravity we move in the antigradient direction successively with the same quantity Δ_0 . If the new point is not the solution, we continue either in the same direction or in a new one with rotation angle greater than 45° . For $m > 1$, the Monte-Carlo method is combined with the above method by choosing an initial point in a random method and proceeding from this point by the method of steepest descent until a local minimum is reached. Since this minimum depends upon the initial point, many trials are made with various initial points chosen at random and the minimum is chosen to be smallest of the local minima.

AUTHOR: Lobachev, A.N.TITLE: The Elementary Cells of Certain Paraffins (Elementarnyye
yacheyki nekotorykh parafinov)PERIODICAL: Kristallografiya, 1958, Vol 3, Nr 3, pp 374 - 375
(USSR).

ABSTRACT: The unit cells of certain paraffins were found to be:

$C_{18}H_{38}$	m.p. = 28 °C	a=7.458	KX	b=4.977,	c'=2.53
$C_{19}H_{40}$	(not det.)	a=7.450		4.964	2.53
$C_{20}H_{42}$	37.5°	7.454		4.969	2.53
$C_{30}H_{62}$	66.2	7.445		4.968	2.54

These dimensions were determined from electronograms, using MgO, NH_4Cl and TlCl as internal standards, to 0.1%. c' was determined only to 0.015 KX. All appeared to have the orthorhombic pseudo cell normally characterising only odd paraffins and even paraffins above $C_{28}H_{58}$.

There are 8 references, 3 of which are Soviet, 4 English and 1 German.

TITLE: Electronographic Determination of the C-H Distance in Certain Paraffins (Elektronograficheskoye opredeleniye rasstoyaniya C-H v nekotorykh parafinakh)

PERIODICAL: Kristallografiya, 1958, Vol 3, Nr 4, pp 452-460 (USSR)

ABSTRACT: The distance C-H in paraffins was found to be 1.123 ± 0.015 KX which greatly exceeds the usually assumed value of 1.09 KX. The paraffins $C_{18}H_{38}$ (I), $C_{30}H_{62}$ (II) and a mixture (III) of composition about $C_{28}H_{58}$ with melting points 28° , 66.2° and 53.5° , respectively, were re-examined by electron diffraction. Their orthorhombic pseudocells were almost the same ($a = 7.458$, $b = 4.977$, $c = 2.534$ (I) KX). The $h\bar{k}0$ zones of reflections were carefully recorded and photometered giving tables of $\emptyset_{h\bar{k}0\text{obs}}$ up to 260. As the structure, except for the exact position of the hydrogen atoms, was known the scattering curve for carbon could be recalculated. The appropriate temperature factor was $B = 4$. Difference syntheses for the H positions were finally calculated

DOV/26-120-3-24/67

TITLE:

The C - H Distance in the Crystal Structure of Paraffins
(Veztoyanie C - H v kristallicheskoy strukture parafinov)

PUBLICATION:

Doklady Akademii nauk SSSR, 1958, Vol. 120, Nr 3, pp. 523-525
(USSR)

ABSTRACT:

The paraffins C_nH_{2n+2} are a useful object in electric diffraction analysis. The present paper investigates the paraffins $C_{18}H_{38}$ (I), $C_{30}H_{62}$ (II) as well as a paraffin with the melting point 53,5 (III). The latter has already been investigated on an earlier occasion (Ref 3). The elementary cells of all these thin paraffins in thin layers are practically equal to one another. The authors here investigate only projections (with respect to the reflections $hk\bar{l}$), because the C - H distance occurs in an undistorted form in this case. The following operations were carried out in the course of the investigation:

- 1) Taking of electron diffraction pictures obtained by electron transmission.
- 2) Determination of elementary cells,
- 3) Microphotometrization

Card 1/3

DOV/20-120-3-24/67

The C - H Distance in the Crystal Structure of Paraffins

of the rings $hk\bar{0}$ of the electronographs taken vertically to the beam. 4) transition from intensities to amplitudes. 5) Construction of Fourier (Fur'ye) syntheses of a certain potential $\phi^*(x,y)$ on a certain plane. 6) Determination of an experimental curve of the elementary scattering of carbon. - Further number of operations is then enumerated. Also the estimation of accuracy is discussed in short. A diagram illustrates by way of an example the total synthesis and the difference-synthesis for C_3H_{62} . The values obtained for the C - H distances are shown in form of a table. There is no reason to believe in the existence of any real difference between C - H₁ and C - H₂, nor of the existence of any such difference in the paraffins under investigation. Other bonds may influence the C - H distance considerably. There are 1 figure, 1 table, and 9 references, 6 of which are Soviet.

TITLE: A device for argon-arc welding. Class 21, No. 187188 [announced by the Design and Planning Office of the "Tsentroenergomontazh" Trust (Proyektno-konstruktorskaya kontora tresta "Tsentroenergomontazh")]

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 20, 1966, 89

TOPIC TAGS: arc welding, inert gas welding, pipe, argon

ABSTRACT: This Author's Certificate introduces: 1. A device for argon-arc welding of root seams in nonrotating pipe joints. The unit contains a welding head with nonconsumable electrode fastened to a carriage equipped with a drive, a sprocket chain with a lock and tension mechanism for holding the carriage against the pipe, and also back-up runners and holding rollers. The runners move along the outside surface of the pipe, while the holding rollers move on the surface prepared for the seam. The installation is designed for holding the carriage at a given position on a vertical or sloping pipe and for eliminating binding of the holding rollers by setting the runners at an angle to the direction in which the carriage moves, while the holding rollers rest on only one side of the surface prepared for the seam. 2. A

UDC: 621.791.754.03-462

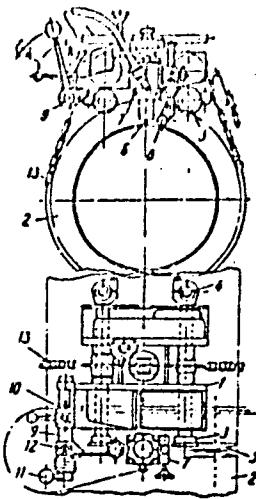

Card 1/3

ACC NR: AP6035871

modification of this device designed for holding the electrode rigidly in the plane of the joint and at a definite height above the work throughout the entire welding process, as well as for removing the welding head from the surface prepared for the seam after the root seam has been welded. The welding head is equipped with a copy roller with a working surface equal in width to that of the cylindrical section of the trapeziform surface of the pipe joint prepared for the seam. The head is also fitted with a suspension system made in the form of a movable rotating bar fixed at the required position in a bracket on the carriage combined with a spring-loaded guide which is fastened to the bar by a lifter holding the welding head. 3. A modification of this device in which chain tension is kept constant by spring coupling between the sprocket and the tension mechanism. 4. A modification of this device designed for rapid mounting on the pipe and rapid removal. The chain lock is made in the form of a clamp with a screw combined with a block hinged to the final link of the chain and connected to the clamp through the pin which serves as the axis for the next link.

TITLE: Heavy aircraft at low altitude

SOURCE: Aviatsiya i kosmonavtika, no. 3, 1966, 63-66

TOPIC TAGS: turboprop aircraft, flying training

ABSTRACT: Flight on multiengine turboprop aircraft at low altitude, using radar sight, radio altimeter, and an altitude warning device which can be adjusted for the minimum permissible altitude is described. It is also stated that on multiengine turboprop aircraft the engines must be maintained at such an operating level that automatic feathering of the propeller is assured in case one of the engines should fail. TITLE: Intensity / A High / Spectrometer DFS-12 with Diffraction Gratings (Svetosil'nyy spektrometr s difraktsionnymi reshetkami DFS-12)

PERIODICAL: Optika i spektroskopiya, 1959, Vol 6, Nr 5, pp 924-926 (USSR)

ABSTRACT: Intensity / A new high / spectrometer DFS-12, using diffraction gratings and photoelectric recording, was developed in 1957. This spectrometer makes it possible to record Raman spectra of transparent liquids and diffusely scattering substances such as turbid solutions, powders and glasses. The spectrometer works in the region 3600-5400 Å. Optically the spectrometer (Fig 1) is a double mirror monochromator (entry slit 1, exit slit 2) with two diffraction gratings (6). To correct for aberrations non-symmetric incidence on gratings was employed and parabolic mirrors (5) were used; the focal length of these mirrors were 800 mm and their relative apertures 1:5.3. The gratings had 600 lines/mm, ruled area 140 x 150 mm and were used in the second order, concentrating ~60% light in the region from 4300 to 4700 Å. Dispersion of the instrument when used as a double monochromator was 5 Å/mm. Using another slit (2) and a rotating mirror (7) the instrument could be used as an ordinary monochromator (exit slit 4) with 10 Å/mm dispersion. A

Card 1/2

SOV/51-6-6-28/34

A High-Speed Spectrometer DFS-12 with Diffraction Grating^a

photomultiplier FEU-17 (8 in Fig 1) was used as a receiver. The photomultiplier was connected to a d.c. amplifier and an electronic recording potentiometer PSI-02. The spectrometer could be used to record spectral lines of energy $10^{-13}W$. Together with this spectrometer a light source was developed for Raman spectral studies. This source was a spiral low-pressure mercury lamp with water-cooled electrodes. Continuous background is practically absent in the spectrum of this lamp and the width of spectral lines emitted by it does not exceed several hundreds of an angstrom. The lamp was supplied with stabilized d.c. current of 6-11 A from a rectifier. Factory tests of the spectrometer DFS-12 showed that Raman spectra were reproducible to within $\pm 2\%$. The instrument resolves a weak line at a distance of 11 cm^{-1} from a strong line. Advantages of the double monochromator principle are seen in a record of Raman spectrum of a glass with a large number of bubbles (Fig 2). Because the source was a low-pressure lamp it was possible to record also low frequencies of powdered samples (Fig 3). There are 3 figures.

TITLE:

Multi-channel Photoelectric Devices DFS-10 for Emission
Spectrum Analysis

PERIODICAL:

Zavodskaya laboratoriya, 1959, Vol 25, Nr 8, pp 1013-1014
(USSR)

ABSTRACT:

The instrument mentioned in the title has a photoelectric recorder of the individual spectrum lines (SL) and is intended to be used for rapid- and marking quantitative spectrum analyses of metals and alloys. The instrument has 36 outlet slits separating 36 (SL). A special programming device makes possible the simultaneous application of any desired combination of 12 (SL), using one (SL) as comparison line, thus 11 elements can be simultaneously determined in a sample. The instrument has a polychromator (vertical scheme), a recording receiver and a GEU-1 generator for electron regulation. The monochromatic radiation is focussed by special mirrors on 36 photoelements (with Sb/Cs-photo cathodes type STsV). The operation interval of the instrument with the photoelements STsV is 2200-5500 Å.

Card 1/2

SOV/32-25-8-40/44

Multi-channel Photoelectric Devices DFS-10 for Emission Spectrum Analysis

The operations of the instrument are described by a schematic diagram (Fig). The recorder is a potentiometer type EPP-09. The reproducibility of the photometric recording during 8 hours of continuous operation at a constant radiation is $\pm 0.6\%$. There is 1 figure.

ACCESSION NR: AF4039808

AUTHOR: Lobachev, M. V.

TITLE: An optical system for a spectrograph or a monochromator. Class 42,
No. 162684

SOURCE: Byul. izobr. i tovar. znakov, no. 10, 1954, 65-66

TOPIC TAGS: optics, optical system, spectrograph, spectrograph optical system,
monochromator, monochromator optical system, spectrography, collimator, collimation

ABSTRACT: This author's certificate introduces an optical system for a spectrograph
or monochromator made on an autocollimating system with a spherical mirror as the
objective. In order to obtain a plane field and to assure the possibility of opera-
tion in a wide range of wave lengths, the dispersing system is located 0.84533 of
the focal length from the apex of the spherical mirror, this mirror being the
objective for the collimator as well as for the spectrograph (monochromator).

TOPIC TAGS: monochromator, laboratory optic instrument

ABSTRACT: An Author Certificate has been issued for a preliminary
monochromator with a mirror lens for use in optical equipment. To
obtain a high quality image along the entire top of the slit, both
mirrors have equal optical power ϕ and the air space between them d must
satisfy the condition $d = \frac{1}{\phi}$ with the dispersion element positioned at

TITLE: On Industrial Practice (O proizvodstvennoy praktike)

PERIODICAL: Vestnik Vysshey Shkoly, 1958, Nr 5, page 42 (USSR)

ABSTRACT: The authors suggest that at the evening courses of industrial faculties, 2 practical training courses be introduced: one of 2 weeks to familiarize the students with economic planning at the workshops, and one of 1 month to show them the enterprise's planning organization. The curricula of the evening courses and faculties of tuition by correspondence do not provide for any practical training as it is expected that the students acquire sufficient practical knowledge during their work. This is not applicable to some vuzes though, in particular, the economic ones with a yearly increasing number of correspondence students. Of 75 enrolled in 1957 for the evening courses of the Economic Faculty of the Saratov Economic Institute, 46 were qualified workmen, 18 checkers, timekeepers, etc. without economic experience. There were only a few bookkeepers, economists and statisticians.

Vorobkov, Lev Nikolayevich, Vladimir Matveyevich Gavrilko, Petr Vladimirovich Lobachev, and Vsevolod Mikaylovich Shestakov

Card. Technical Sci.
Vodoponizheniye v gidrotekhnicheskem stroitel'stve (Lowering the Water Table in Hydrotechnical Construction) Moscow, Gosstroyizdat, 1960. 243 p. Errata slip inserted. 4,000 copies printed.

Scientific Ed.: Yu. G. Trofimenkov, Candidate of Technical Sciences; Ed. of Publishing House: P. V. Safonov; Tech. Ed.: Ye. L. Temkina.

PURPOSE: This book is intended for engineering and technical personnel in hydrotechnical construction who are occupied with problems of lowering water tables. The book may also be of interest to mining personnel.

COVERAGE: The authors discuss the designing and calculation of systems for lowering water tables. They deal chiefly with

Card 1/7

Lowering the Water Table (Cont.)

SOV/4912

large systems used in excavations for water works. Problems in installing the lowering apparatus are discussed. Special attention is given to the method using deep wells. Considerable space is given to the question of designing drainage systems for open-cut mine workings. L. N. Vorobkov wrote Sec. 1 of Ch. I, Sec. 1 of Ch. II, Sec. 1 of Ch. IV, and Sec. 1 and 2 of Ch. VII. V. M. Gavrilko wrote Ch. V and Secs. 1, 2, 3, 5, and 6 of Ch. VI. P. V. Lobachev wrote Secs. 3 and 4 of Ch. II; Secs. 2 and 3 of Ch. IV, and Sec. 4 of Ch. VII. Secs. 2 and 3 of Ch. I, Ch. III, and Sec. 4 of Ch. VI were written by V. M. Shestakov. Sec. 3 of Ch. VII was based on materials supplied by Engineer A. O. Shestopal. The authors thank Candidates of Technical Sciences V. M. Grigor'yev and Yu. G. Trofimenkov for their assistance. There are 100 references: 87 Soviet, 5 German, 6 English, and 2 French.

A. Nejepša and M. Vlk.

PURPOSE: This book is intended for engineers and scientific personnel concerned
with the pressworking of metals.

COVERAGE: Published jointly by Mashgiz and SNTL, the book discusses the present
state of the pressworking of metals in the USSR and the Czechoslovak Socialist
Republic. Chapters were written by both Soviet and Czechoslovak writers. No
personalities are mentioned. There are 129 references: 98 Soviet, 16 English,
8 German, 5 Czech, and 2 French.
